

Fork Positioner for Forklifts

Forklift Fork Positioner - A fork positioner is a device made out of top quality materials designed to be able to withstand the most demanding operations and work environments. This piece of equipment can enable the one driving to be able to work the forks hydraulically without leaving the seat. Side shifting models have the extra ability to laterally position the arms or the entire load so as to facilitate more precise lifting and placement in a faster and much more effective method.

The unique blade pocket design can enable the person operating it to securely sway the unit's forks without any worry of destroying the positioning cylinders. This could allow the operator the alternative to either perform simultaneous or independent fork movement, depending on the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages could be transformed into blade positioners on existing units.
